

Teaching for Mastery - Updated for 25/26

Become a Secondary Maths Specialist

Join a national network of teachers transforming maths education through a mastery approach.

This is a fantastic opportunity for teachers to strengthen maths education through a mastery approach while developing their own professional and leadership skills. As a Secondary Mastery Specialist, participants will focus on improving teaching and learning within their own classroom and across their department.

Developed by the NCETM and led locally by Maths Hubs, supports long-term, sustainable change in maths departments.

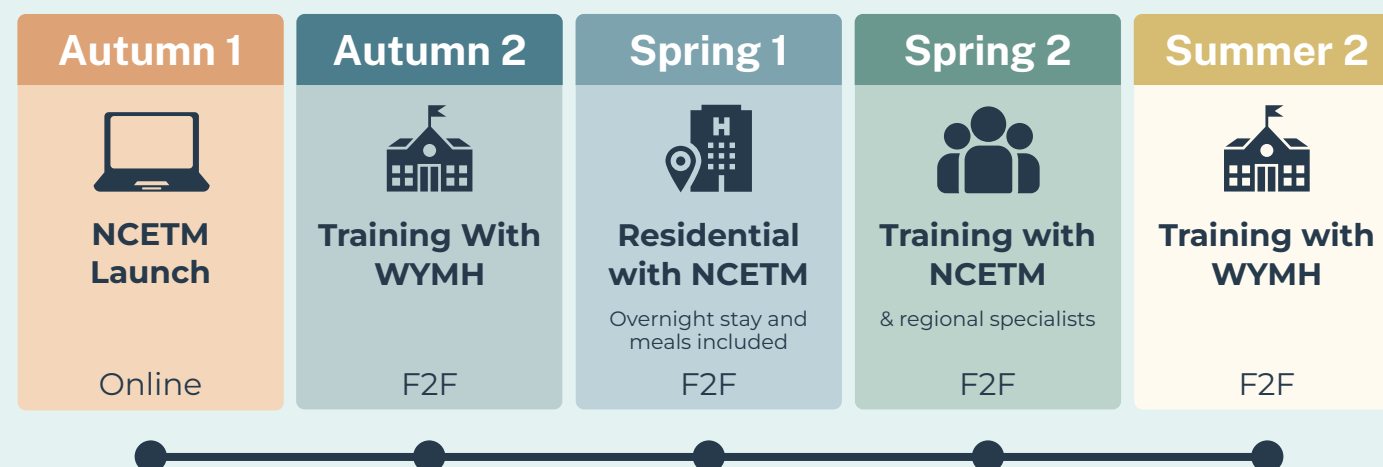

By taking part in this programme, schools will benefit from access to high-quality materials and DfE-aligned guidance to help design well-crafted lessons that support every learner.
